CAREER PROFILE

Software Engineer with 3 years of experience architecting multi-tenant SaaS platforms, real-time systems, and production web/mobile applications for international clients across SaaS, real estate, healthcare, and social platforms.

Strong background in clean architecture and end-to-end delivery, from requirement gathering through production deployment, building scalable, high-performance backend systems.

Skilled in direct client communication across time zones: requirement gathering, demos, and progress reporting for distributed teams.

Leverages AI-assisted development tools (Claude Code, Cursor) with structured prompt engineering to accelerate delivery without compromising code quality.

CORE COMPETENCIES

Languages: JavaScript, TypeScript, Python, C++, SQL

Frontend: React.js, React Native, Next.js, Tailwind CSS, HTML/CSS

Backend: Node.js, NestJS, Express.js

Database: MongoDB, PostgreSQL, Firebase, Supabase

Cloud & DevOps:AWS, Google Cloud (GCP), Firebase (FCM, Auth, Firestore), Docker, Git/GitHub, CI/CD

AI Development: Claude Code, Cursor, Prompt Engineering, RAG Pipelines, Vector Databases, LLM API Integration

Tools & Soft Skills: Jira, Trello, ClickUp, Postman, Socket.io, Client Communication, Agile/Scrum, Remote Teamwork

PROFESSIONAL EXPERIENCE

Techtimize — Software Engineer *Oct 2025 – Present*

Lahore, Pakistan

- Develop and maintain full-stack web applications with React.js, Next.js, and Node.js for production business clients, including microservices-based backends with NestJS and PostgreSQL deployed on AWS.
- Build responsive, component-driven interfaces with RESTful APIs, authentication, admin panels, role-based access control, and payment gateway integrations including Stripe.
- Accelerate delivery using AI-assisted tools (Claude Code, Cursor) with structured prompt engineering while maintaining code quality; serve as primary client contact, translating business requirements into technical solutions and leading demos.

360HR — MERN Stack Developer *Aug 2023 – Jan 2026*

Remote · Part-time / Contract

- Led end-to-end development of an enterprise job portal and applicant tracking system (ATS) on the MERN stack, job posting, candidate search, applicant pipelines, and recruiter analytics.
- Designed RESTful APIs with Node.js and Express.js for job workflows, applications, and notifications, secured with JWT-based role-based access for admins, recruiters, and applicants.
- Optimized MongoDB schemas, aggregation pipelines, and indexing for fast search across large candidate datasets; integrated email notifications, resume uploads, and reporting; led requirement discussions and sprint demos with international stakeholders.

Euphoria XR — Software Engineer *Jun 2024 – Oct 2025*

Lahore, Pakistan

- Developed and maintained a production React Native social app with location-based discovery, real-time chat, friend management, user profiles, and event workflows.
- Built a scalable real-time chat module with Socket.io (reliable delivery, presence tracking, low-latency communication) and integrated RESTful APIs for app features, user data, and events.
- Engineered the Node.js/MongoDB backend, including a reels-based feature letting users discover and apply to job opportunities via short-form video feeds, with optimized queries and scalable APIs.

PROJECTS

Entry Club — Multi-Tenant Web & Mobile Platform *Next.js, NestJS, React Native, OAuth, Payment Gateways*

Architected and built a full-stack multi-tenant platform end-to-end, from Next.js/React web frontends and reusable component libraries through loosely coupled, microservice-ready NestJS backend services. Integrated Meta APIs, Google APIs, OAuth, push notifications, analytics, and payment gateways, designed for scalability across multiple tenants.

360HR — B2B HR & Recruiting Platform *React, Node.js, MongoDB, REST APIs*

Built a B2B SaaS platform connecting companies and applicants through role-based dashboards for recruiters, HR staff, and candidates, job postings, candidate pipelines, applicant profiles, interview scheduling, onboarding workflows, and HR document/attendance management, with a career portal and role-based access tying recruiting, HR ops, and onboarding into one system.

Tawabiq — Real Estate Platform *Next.js, NestJS, PostgreSQL, SSR, Geolocation*

Built a complete real estate platform with three connected experiences: a public marketplace (posting, search, favorites, map/geolocation search); a broker management system (leads, communications, appointments, commission tracking, transactions); and an enterprise admin panel with role-based dashboards, listing approvals, content moderation, reporting, and audit logs.

Vumi — Cross-Platform Mobile Application *React Native, Node.js, MongoDB, Firebase, Stripe*

Developed a cross-platform social app in the style of LinkedIn, a professional feed plus a short-form reels feature for discovery, real-time direct messaging, in-app Stripe-style checkout, authentication, dynamic feeds, and Firebase push notifications (FCM, Auth); optimized with efficient list rendering, lazy loading, and state management.

HealthCare Companion — Mobile Health & Wellness App (Published) *React Native, Firebase, Sign in with Apple, Google Play Billing, Apple Pay*

Built and published a cross-platform React Native healthcare app to the Google Play Store and Apple App Store, with a Firebase backend (Auth, Firestore, FCM) and an admin panel for content and user management; implemented Sign in with Apple alongside standard authentication for iOS compliance.

- Designed a guided onboarding flow into structured health courses with a real-time XP/points system, streak-based habit tracking, and gamified achievement badges to drive daily engagement.
- Delivered curated health tips and a progress dashboard (XP, points, course completion) with push-notification reminders (FCM) for pending courses and streaks, in a fully responsive UI across phone/tablet.
- Integrated in-app purchases via Google Play Billing (Play Console) on Android and Apple Pay/StoreKit on iOS for premium course and content unlocks.

AI Calling Bot — Voice Automation with RAG *Python, RAG, Vector DB, LLM APIs, STT/TTS*

Built an AI-powered calling bot for automated voice conversations using speech-to-text and text-to-speech pipelines, with a RAG pipeline (vector database, embedding-based semantic search) for real-time context retrieval, LLM API integration, and conversation state management.

Additional Projects: French Riviera Travel (travel content platform, Next.js) · Instant Custom Boxes (e-commerce landing & quote flows, React.js) · Bitrix24-Based CRM (task & workflow automation) · T-Mobile (real-time collaborative task tool, React.js/Node.js).

EDUCATION

B.S. in Computer Science

University of Lahore · Lahore, Pakistan · Sep 2020 – Jul 2024

LANGUAGES

English — Professional working proficiency · Urdu — Native
